SenNet IoT Easy Meter Sigfox

Energy Meter 3PH CT/Rogowski

&

Gateway for remote nodes

General description

SenNet IoT Easy Meter Sigfox is a device that monitors 3PH energy electrical circuits, with two options of current transformer, 0.33Vac or flexible Rogowski. This device has the possibility to create a local RF Network with remote nodes with different features: Pulse Counter / Temperature-Humidity / CO2 / Particulate Matter etc.., and send all this information in one Sigfox message.

The configuration of all these features is possible by three ways:

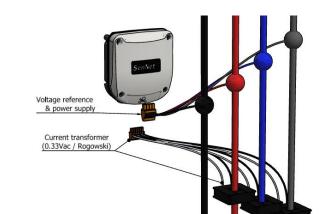

- Trough APP SenNet IoT (IOS or Android).
- Downlink message on sigfox backend.
- Micro-usb connection and console/terminal.

The end-user can select what kind of energy data and remote device wants to upload to the cloud, must select the type of message (see in the next section).

Power supply

The device uses voltage reference as the power supply (100-265VAC @ 50HZ), <u>it's important just to use Neutral</u> Line Vn and V1. There is an internal fuse to protect the device against surge damages.

| Voltage power supply | 100-265VAC @ 50HZ |
|----------------------|-------------------|
| Power | <1W |

Basic steps to intall:

- Set the type Current Transformer: CT-0.33Vac: 50A, 100A, 150A, 400A, 800A Flexible-Rogowski: 3500A, 3700A, 5000A
- 2. Set the type of message to use and take note to parse this data on your preferred platform.
- 3. Take note ID / PAC to sign the device on Sigfox Cloud.
- Connect voltage reference (feed internal power supply) and current reference.

Additional steps:

- Define and install remotes devices that will join to Local Network
- Set an univoque ID at each remote device throught SenNet IoT APP.

Easy to set with **SenNet IoT** APP iOS & Android (phones with NFC)

SenNet IoT (iOS version) Link

SenNet IoT (Android version) Link

SenNet ion

Sigfox Ready Certification / Class U0

Local RF Network

868.224MHz (EU) 2FSK / 300bps / 6.25Khz (by default)

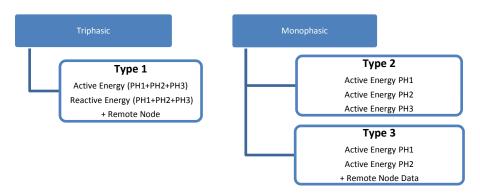

Type Message

SenNet IoT Easy Meter is a powerful Energy Meter, the client must select what kind of data will be uploaded to the platform. For that reason, the devices have been defined by default several types of message what includes the main information from each electricity measurement.

The main interest always is the total Energy accumulated, if your interest is on another parameter you can contact with our technical department to ask for it.

Depending on the type of load to be monitored (triphasic or monofasic) you may choose these types of uplink messages:

A common point in all types of messages is the head (defined with <u>2 bytes</u>) that includes important information embedded in the message (type device/type message/errors.. etc). In the next table are defined the mean of these info-fields.

| | | | | | | | | Fie | ld Info | | | | | | | | |

Local RF Network & types of Remotes Nodes

SenNet IoT Easy Meter can works like sigfox gateway for up to 6 remotes nodes.

Debug option

It's possible debug on remote this device to enable with downlink message this feature. There are tree types of debug message, Debug 1 (version HW/FW), Debug 2 (internals errors), Debug 3 (instant power meter values). If this feature is enabled one time per day will be update these messages, with this secuence:

| | Type 0 : Debug 1 (9 bytes) | | | | | | | | |
|-----------|----------------------------|-----|-----------|------------|-------------|----------|--|--|--|
| Field | Ir | nfo | HW device | Version FW | Revision FW | Not used | | | |
| Type data | See Table 1 | | | | | - | | | |
| Byte | 1 | 2 | 3 | 4 | 5 | 6-9 | | | |

| | Type 0 : Debug 2 (11 bytes) | | | | | | | | | | | | | | | | | | | | | | | |
|--------------|------------------------------------|----------------|-------------------|-------------------------------|--------------|--------------|--------------|-----------------|--------------|---------|------------------|--------------|------|---|--|--|--|--|--|--|------|--------------|------|---|
| Field | Info | Reset event | Internal error | Wrong voltage frequency | Error PH1 | Error PH2 | Error PH3 | Voltage event 1 | | Volta | Gen. | | | | | | | | | | | | | |
| | | | | | | | | Bit0 | SAG- PH1 | Bit0 | PH1<50v | | | | | | | | | | | | | |
| | | | | | | | | Bit1 | SAG- PH2 | Bit1 | PH2<50v | | | | | | | | | | | | | |
| | | | | | | | Bit2 | SAG- PH3 | Bit2 | PH3<50v | | | | | | | | | | | | | | |
| Type data | See Table 1 | - | - | Freq =!50Hz | - | - | - | Bit3 | OVER- PH1 | Bit3 | Voltage secuence | - | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | | | | | | Bit4 | OVER- PH2 | Bit4 | - |
| | | | | | | | | | | | Bit5 | OVER- PH3 | Bit5 | - | | | | | | | | | | |
| | | | | | | | | Bit6 | - | Bit6 | - | | | | | | | | | | | | | |
| | | | | | | | | Bit7 | - | Bit7 | - | | | | | | | | | | | | | |
| Byte | 1 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 9 | 10 | | 11 | | | | | | | | | | | | |

For normal function all fields must be 0.

| Type 0 : Debug 3 (8 bytes) | | | | | | | |
|----------------------------|--------|-------|----------------------------|-------------------------------|-------------------------------|--|--|
| Field | Ir | nfo | Active Power PH1 | Active Power PH2 | Active Power PH3 | | |
| Type data | See Ta | ble 1 | Signed int (Value*100)Watt | Signed int (Value*100)Watt | Signed int (Value*100)Watt | | |
| Byte | 1 | 2 | 3 - 4 | 5 - 6 | 7 - 8 | | |

With this last one debug message is possible detect wrong installation issues, for example CT with wrong orientation. Use this extra feature to analisys or debug installation.

Downlink Message

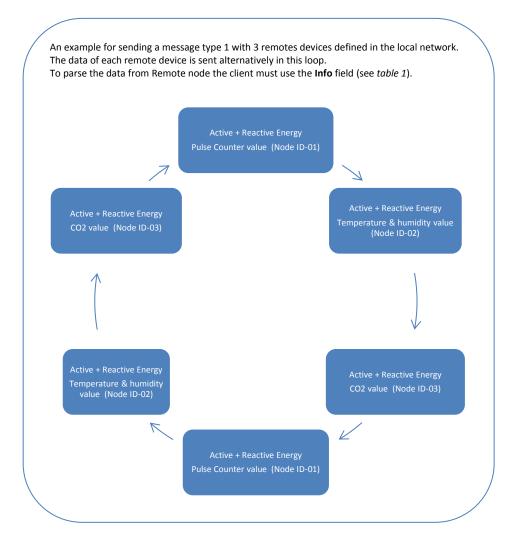

It's possible to set the device in the cloud without interacting with it locally, defining this type of downlink message and CT value on the sigfox backend or in your platform. That method is optional but it's not necessary.

| Byte | | 1 | 2 - 5 | 6 | 7 | 8 | |
|-------|-------|--|----------------------|------------------------------------|--------------------------------------|------|--|
| Field | | Easy Meter Setup byte (1byte) | Set time (4bytes) | Type uplink Message (1 byte) | CT value (2 byte) (hex. value) | | |
| | Bit 7 | 1 (by default) | | | | | |
| | Bit 6 | 1/0 enable/disable set Time | | | | | |
| | Bit 5 | 1/0 enable/disable set Type uplink Messsage | | 01 | | | |
| Value | Bit 4 | 1/0 enable/disable set value CT | {Time-Epox} | 02 | High | Low | |
| value | Bit 3 | 1 (by default) | (Time-Epox) | 03 | Part | Part | |
| | Bit 2 | 1/0 enable/disable Debug 1 (versión HW/FW) | | | | | |
| | Bit 1 | 1/0 enable/disable Debug 2 (internals errors) | | | | | |
| | Bit 0 | 1/0 enable/disable Debug 3 (instant power value) | | | | | |

Example for downlink message:

F8 {time} 01 00 32 → With this downlink message set the remote device on time, with type of message 01 and CT value 50 Amps, all debug messages disables.

LongNet ID=8552

Set ID of each remote device, taking note of LongNet ID on the label and assigning it through APP phone (Android or iOS version).

For previous example, it's defined <u>Number of remotes=3</u>, and assigned each position (ID-01 / ID-02 / ID-03) at LongNet ID from label of each device, in this particulate example:

| Sent | Net IoT |
|------------------------|------------|
| Basic Sets | Help |
| CT Value | 50 🗸 |
| type uplink Message | 1 |
| Advances Sets | |
| Interval to send(min.) | 11 |
| Number of Remotes | 3 |
| ID Modbus | 1 |
| ID-01 5236 | ID-02 1529 |
| ID-03 8552 | |
| | |
| Save on I | Device |

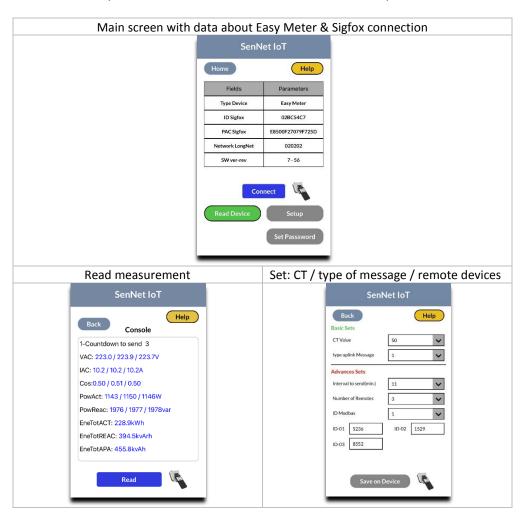

Steps for install Easy Meter with remotes nodes, first must be installed Easy Meter and power supply. Later install one by one each remote device, to analyzed if link coverage is fine, set each remote device on 'RF_prog' mode '1', sliding the switch to mini-usb connector side.

Remote device enter in beacon send mode each 5 seconds, if Easy Meter receive this beacon sound 5 beeps on Easy Meter side. After check that coverage is enough return switch of remote device to `RF_prog' mode 0, and reset it.

By this way you check that link between remote device and Easy Meter works fine.

SenNet IoT APP - Android and iOS (only phones with NFC feature)

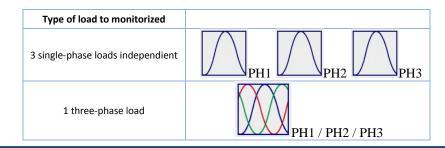

Use APP of freely download to set and read measurement from Easy Meter.

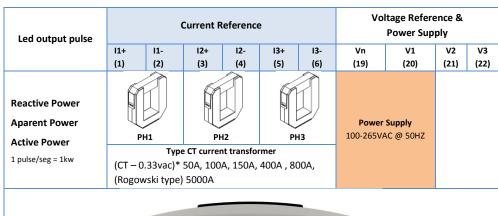

Power Meter features

These devices include advanced technology for metering power electricity loads, using a current reference and voltage reference. It's possible to use this device like a 3 single-phase meter or 1 three-phase meter, it depends on the client's goal to monitor.

Voltage reference

| Range | 110-220/240VAC (CAT III – 400V) |
|--------------------------|---|
| Frequency | 50-60Hz |
| Electrical isolation | 2.5Kv @ 60second |
| Power supply requirement | 0.1 VA per phase |
| Accuracy | Class 0.2 (+/-0.2%) |
| 4 | Recommend using electrical protection before connecting this reference. |
| | |

Current reference

This device can use current transformers (CT) of two types 0.33Vac and flexible type (Rogowski), depending on each type has a different type of accuracy.

| Types | Range of measureament | Output type | Accuracy |
|------------------------------|-----------------------|----------------|-------------------|
| | measureament | type | |
| CT 50 A | 150 A | 0.33VAC | +/-1% (5%100% In) |
| CT 100 A | 1100 A | 0.33VAC | +/-1% (5%100% In) |
| CT 150 A | 1150 A | 0.33VAC | +/-1% (5%100% In) |
| CT 400 A | 1400 A | 0.33VAC | +/-1% (5%100% ln) |
| CT 800 A | 1800 A | 0.33VAC | +/-1% (5%100% ln) |
| Flexible 5000 A (7cm Ø) (*) | 105000 A | Rogowski | +/-1% (centered) |
| Flexible 5000 A (12cm Ø) (*) | 105000 A | Rogowski | +/-1% (centered) |
| Flexible 5000 A (20cm Ø) (*) | 105000 A | Rogowski | +/-1% (centered) |

(*)Must use flexible SenNet Rogowski model to certificate Class 1. (Factory Calibrated)

| Accuracy on current measurement |
|---------------------------------|
| F NA-1 CN-1 CT 0 221/ |

| Easy Meter + SenNet CT 0.33Vac | Class 1 | (Class 0.5 under requeriment) |
|---------------------------------------|---------|-------------------------------|
| Easy Meter + Flexible SenNet Rogowski | Class 1 | Factory Calibrated |

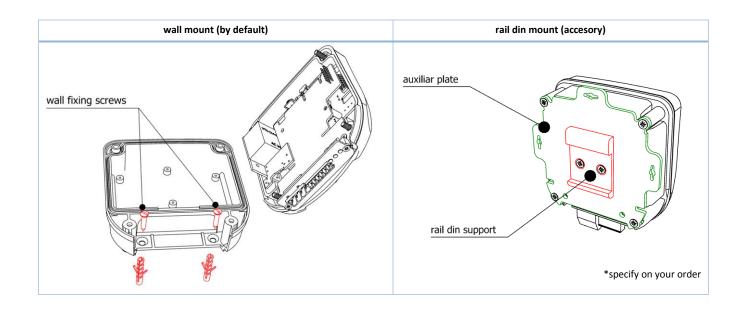

| El | ectr | ical | iso | lati | on |
|----|------|------|-----|------|----|
| | | | | | |

| SenNet CT 0.33Vac | 2.5KV / 0.5mA / 3second |
|--------------------------|-------------------------|
| Flexible SenNet Rogowski | 600V CAT IV |

Holding case

| IP Grade | IP-60 |
|---------------------|-------------------|
| Temperature details | |
| Working temperature | -20ºC+70ºC |
| Store temperature | -20ºC+75ºC |
| Holding | |
| Dimensions | 119 x 111 x 53 mm |
| Type mount | Wall or din rail |
| Plastic Material | ABS – V0 |

Warranty

Satel Spain guarantees its products against all manufacturing defects for a period of 1 year.

No return of material will be accepted, nor will any equipment be repaired if it is not accompanied by a report (RMA) indicating the defect observed or the reasons for the return.

The warranty will be void if the equipment has suffered "misuse" or the storage, installation or maintenance instructions in this manual have not been followed. "Misuse" is defined as any use or storage situation contrary to the National Electrical Code or that exceeds the limits indicated in this manual.

Satel Spain declines all responsibility for possible damage to the equipment or to other parts of the installations and will not cover possible penalties derived from a possible breakdown, poor installation or "misuse" of the equipment. Consequently, the guarantee is not applicable to breakdowns produced in the following cases.

- Due to overvoltage and/or electrical disturbances in the supply.
- By water, if the product does not have the appropriate IP rating.
- For exposing the equipment to extreme temperatures, which exceed the operating or storage temperature limit.
- Due to a modification of the product by the client without prior notice to Satel Spain.

Faced with possible errors in this technical sheet, keep it updated in our website.
